Harmony XL PRO

Special Edition

Dye VL

The Dye VL applicator on the Harmony XL PRO platform uses intense pulsed light (IPL) energy to target the haemoglobin in vascular lesions to induce superficial vascular obstruction.

Harmony XL PRO

Special Edition

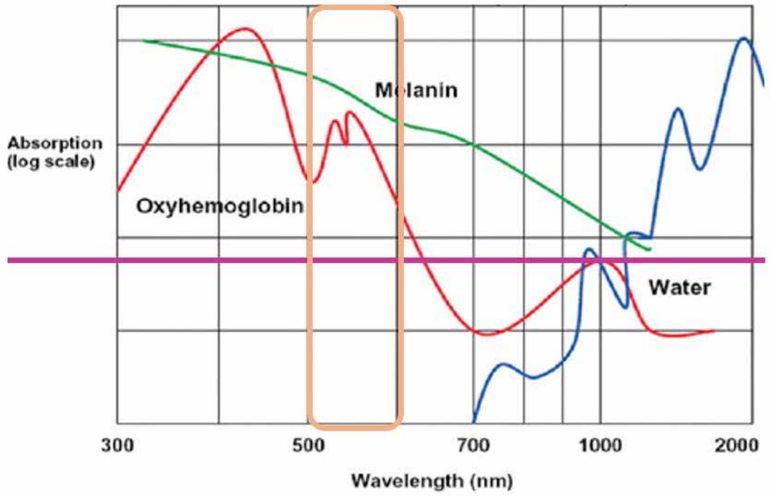
Dye VL

Dye VL uses Alma's narrow band spectrum intense pulsed-light dye technology with a wavelength range of 500-600nm to target include two haemoglobin absorption peaks, ~540 nm and ~570 nm. The high absorption in haemoglobin makes the technology highly effective in the treatment of superficial vascular lesions.

Dye VL is available in two spot sizes:

3cm^2 spot size – Dye VL applicator

1cm^2 spots size – Dye VL PRO applicator



Absorption graph showing absorption of at two peaks oxyhaemoglobin, and melanin in the band of 450-600nm.

Dye VL is intended to treat:

- Vascular Lesions
- Purpura
- Pigmented lesions

Indicated for skin types I-IV

Harmony XL PRO

Special Edition

Dye SR

The Dye SR applicator on the Harmony XL PRO platform uses intense pulsed light (IPL) energy to target haemoglobin in vascular lesions to induce superficial vascular obstruction.

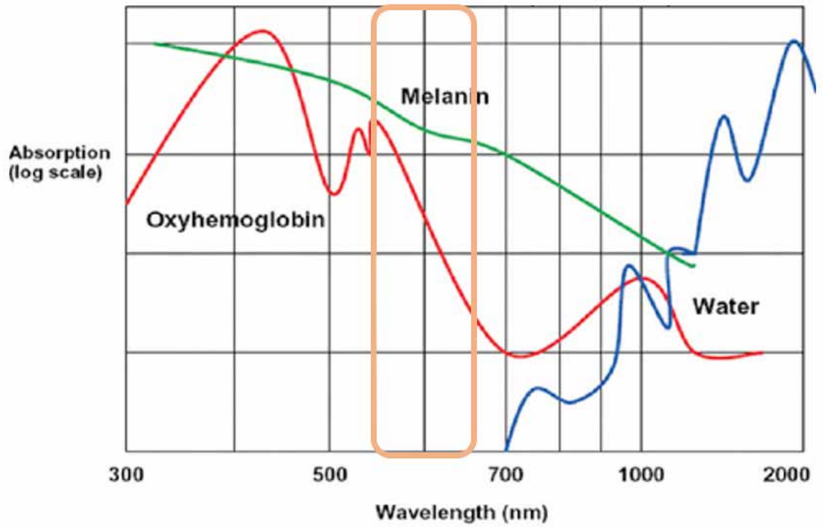
Dye SR

Dye SR uses Alma's narrow band spectrum intense pulsed-light dye technology with a wavelength range of 550-650nm. This band has high absorption in oxyhaemoglobin and melanin, making the technology highly effective in the treatment of superficial vascular and pigmented lesions.



Absorption graph showing absorption of oxyhaemoglobin and melanin in the band of 550-650nm.

Dye SR applicator is indicated to treat:

- Vascular lesions
- Pigmented lesions

Indicated for skin types I-V
